KUMARAN BALACHANDRAN

Frontend Developer | React.js | TypeScript | Next.js

Chennai, India | +91 8428023295 | kumaranbalachandran642@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Frontend Developer with around 2 years of experience building scalable, production-grade web applications using React.js, Next.js, and TypeScript. Skilled in component-driven architecture, REST API integration, state management (Redux Toolkit, Context API), and Agile/Scrum delivery. Experienced in collaborating with cross-functional teams including backend, QA, and UX designers to ship enterprise-grade solutions. Familiar with CI/CD workflows, Git-based version control, and modern development best practices. Eager to contribute to Risk and Compliance Engineering team.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+/ES8+), HTML5, CSS3, Material UI (MUI), Responsive Design

State Management: Redux Toolkit, Context API, React Hooks (useState, useEffect, useMemo, useCallback)

API & Integration: REST APIs, Axios, Fetch API, JSON

Backend Exposure: Node.js, Express.js, SQL, NoSQL (MongoDB – basics)

Performance: Code Splitting, Lazy Loading, Memoization, Bundle Optimization (Webpack, Vite)

CI/CD & Tools: Git, GitHub, GitHub Actions (CI/CD), Netlify, VS Code, Postman, Chrome DevTools

Practices: Agile (Scrum), Clean Architecture, Version Control

WORK EXPERIENCE

Junior Software Developer — Gove Technologies, India | *Aug 2024 – Present*

- Developed scalable, responsive web applications using React.js, Next.js, TypeScript (ES6+/ES8+), HTML5, and CSS3, delivering enterprise-grade UI modules with improved performance and usability.
- Integrated 10+ REST APIs using Axios and Fetch API, enabling real-time frontend-backend communication
- Implemented state management using Redux Toolkit and Context API for predictable, maintainable application state across complex enterprise features.
- Built a reusable component library with Material UI (MUI), reducing development time by 20% and improving maintainability across cross-functional teams.
- Optimized application performance using code splitting, lazy loading, and memoization (useMemo, useCallback), achieving measurably faster load times.
- Collaborated with backend engineers, QA teams, and UX designers in Agile (Scrum) environments, delivering production features on schedule with quality code.
- Participated in code reviews, enforced clean code standards, and maintained well-documented codebases using Git and GitHub.
- Gained exposure to CI/CD pipelines and deployment workflows; familiar with GitHub Actions and modern build tools (Webpack, Vite).

KEY PROJECTS

MoviX — Scalable Movie Streaming UI Live Demo

React.js · Vite · Context API · REST APIs · Responsive Design

- Engineered a feature-rich movie browsing platform with search, pagination, and personalized favorites using TMDB REST APIs.
- Architected reusable and modular UI components following best practices, improving code maintainability and scalability.
- Implemented client-side authentication and protected routing to manage user sessions securely.
- Enhanced user experience with skeleton loaders, smooth animations, and mobile-first responsive design.
- Reduced redundant API calls by ~25% using optimized state management and improved performance through optimized state handling and conditional rendering strategies.

Bill Pay — Toll Billing & Payment Management Platform

React.js · Next.js · TypeScript · Material UI · REST APIs · Redux Toolkit

- Developed and enhanced an enterprise-level toll billing and payment platform serving thousands of daily transactions, including billing, transaction, and vendor payment modules.
- Designed fully reusable, scalable UI architecture aligned with component-driven best practices.
- Implemented real-time transaction tracking with complete audit trail features, improving data traceability.
- Optimized rendering using useMemo, reducing unnecessary re-renders by ~30% and improving platform responsiveness.

Inventory Management System

React.js · Material UI · REST APIs · Redux · SQL/NoSQL Integration

- Enhanced a full-featured inventory management system with dynamic product configuration and CRUD operations, integrating REST APIs for product, category, and vendor management.
- Implemented stock traceability including item history logs and real-time stock status updates.
- Designed reusable form components and data tables that reduced code duplication across 5+ modules.
- Applied proper REST API error handling and loading state patterns, ensuring robust frontend-backend communication.

EDUCATION

Bachelor of Technology — Artificial Intelligence & Data Science

Misrimal Navajee Munoth Jain Engineering College, Anna University | 2020 – 2024 | CGPA: 8.4 / 10.0
